## (54) RADIO TRANSMISSION CONTROL METHOD AND RADIO TRANSMISSION DEVICE

### (57)Abstract:

**PROBLEM TO BE SOLVED:** To simply select a control station in an excellent way in the case that a control station is set and access management for radio communication is conducted under the control of the control station.

**SOLUTION:** In the radio transmission control method where radio communication access among a plurality of communication stations is controlled through radio transmission of a control signal from a central control station to a terminal station, a communication station selected as the central control station is discriminated from a station with which each terminal station in a radio network can directly make communication, and when it is detected that a terminal station can make radio communication with a more number of communication stations than number of stations with which the central control station can directly make communication, the detected terminal station is changed into the central control station.
